

# Brandt EDTA Manganese

## Chelated Trace Elements

### General Recommendations

EDTA MANGANESE is intended for the prevention and/or correction of Manganese deficiencies in all crops when determined by a soil test or plant tissue analysis. Because EDTA MANGANESE is fully chelated it is designed for mixing with liquid NPK starter fertilizers including those made with orthophosphate and/or containing pesticides.

### Row or Band Application

Apply 3-5 pounds (1-2 quarts) EDTA MANGANESE per acre, just before or at planting time.

### Broadcast Application

Apply 5-7 pounds (2-2.5 quarts) EDTA MANGANESE per acre, just before planting and work into the top 3-5 inches of soil.

**Note:** For foliar application, EDTA MANGANESE may be used at the rate of 2-4 pounds (1.5-3 pints) per acre with a minimum of 20 gallons of water. Or use BRANDT NITRO-MN for foliar applications.

*Optimum rate of application will vary between fields, depending on soil pH and organic matter content. For best results, follow soil test or plant analysis recommendation.*

# BRANDT

Guaranteed By:  
Brandt Consolidated, Inc.

### Guaranteed Analysis

Manganese (Mn) ..... 6.00%  
6.00% Chelated Manganese

Derived from Manganese Ethylenediaminetetraacetate (EDTA). F76

### Mixing Instructions

Put 1/3 of water in tank. Add correct amount of EDTA MANGANESE. Fill tank with balance of fertilizer or water. Add other chemicals, if any. Agitate adequately to mix.

**Caution:** Check compatibility by utilizing a jar test before mixing.

**Weight per gallon: 11.0 lbs**  
**Freezing temperature: 20°F**

**CAUTION: KEEP OUT OF REACH OF CHILDREN**  
**WARNING: DO NOT TAKE INTERNALLY**
